## Summary

Account manager with an engineering background, running a **34-account, ∼$22K MRR (∼$270K ARR) book** in India's highly competitive **BFSI segment** at HyperVerge (AI KYC / identity SaaS). In my **first 3 months** I **booked $8K in new MRR, with $5K already realised**, kept the book at **∼112% GRR**, and closed, renegotiated and expanded accounts across lending, wealth, broking, crypto and payments. A prior integration-engineering stint means I can carry a deal from the business case to the API call.

## Experience

**HyperVerge, Bangalore**
*Key Account Manager, Mid-Market India* Aug 2026 – Present
*AI identity-verification / KYC SaaS; BFSI-heavy mid-market book (AE/AM + CSM)*

- **Took over a 34-account, ∼$22K MRR book in week one** and ran it at **∼112% GRR** (16 accounts at NRR $\geq$ 100%), across **digital & personal lending, MSME lending, gold loans, insurance premium financing, bond / fixed-income platforms, stockbroking & wealth, crypto exchanges, payments & cross-border, and insurance**.
- **Booked $8K in new MRR in the first 3 months — $5K already realised (live and billing)** — through new-logo closes, cross-sell and renegotiations.
- **Negotiated value, not discounts:** turned a lender's (CreditSea) price-cut ask into an **INR 4.5L committed monthly minimum** — a revenue floor — and used it to open first-mover Video KYC and eSign deals; closed a referral logo (Aadigo) on a monthly minimum plus a one-time implementation fee.
- **Closed and generated pipeline:** revived a dormant RC-Verification deal (Torque Insurance) to signature and into integration; sourced **4 new leads** for Sales, including a client referral to Housing.com.
- **Protected revenue:** found modules billed with no signed agreement (WeRize) and a client running production on another NBFC's credentials (Babalease); regularised both commercially and got the usage billed — no dispute.
- **Retained at-risk accounts:** de-escalated a **CEO-level escalation** at Grip Invest, then repositioned a compliant API as a regulatory-risk fix; unblocked an NBFC client's go-live with KYB support; took India Gold **live on CKYC in one day** ahead of an audit.
- **Ran data-led reviews:** delivered a QBR analysing **10+ onboarding funnels** (GoldenPi); built a portfolio dashboard (GRR, NRR, NPS, DSO, QBR / visit cadence, risk flags) to prioritise the book.

**HyperVerge, Bangalore**
*Integration Engineer, Solutions (Intern)* Jan 2026 – Jun 2026

- Owned **6 enterprise fintech / banking accounts** (HomeCredit, PaytmMoney, Mobikwik, IndMoney and more) from solution design to go-live; took **3 live at >95% verification conversion (∼10% lift)** by adding modules clients hadn't scoped.
- Tracked deals in **HubSpot** and built **HV Deals Bot** (Python + Slack) to give the team live deal-stage visibility.

## Selected Projects

**CallSense — sales-call intelligence platform** callsense-aaryan-s-maralihallis-projects.vercel.app

- AI scoring of recorded sales calls against a QA rubric, with compliance flags and a manager feedback loop; live, full-stack.

**SDIS — secure RAG service** github.com/Aaryansm11/SDIS

- Document AI with access control and audit logging — fluency in the security and AI questions enterprise buyers ask.

## Skills

- **Account management:** book ownership, retention (GRR / NRR), cross-sell & upsell, pricing & negotiation, QBRs, client visits, escalation handling, stakeholder mapping
- **BFSI / KYC domain:** CKYC, Video KYC, eSign, KYB, AML screening, bank-account verification, RBI-regulated onboarding
- **Revenue tools:** HubSpot, Metabase, CPQ, Excel / Google Sheets modelling, Notion, JIRA, Slack
- **Technical edge:** REST APIs & integrations, Python, SQL, AI / LLM applications

## Education

- **B.Tech, Computer Science** — PES University, Bangalore — 2022 – Jul 2026
- **IEEE ICASI 2026 (Kyoto), Oral Presentation** — interpretable ML for stroke prediction (ECG / PPG)
