Summary

Commercially minded engineer who turns account data and market signals into revenue decisions. At HyperVerge (AI KYC / identity SaaS) I run a **34-account, ∼$22K MRR (∼$270K ARR) BFSI book** and, in my **first 3 months**, **booked $8K in new MRR with $5K already realised** while holding **∼112% GRR**. I built the portfolio analytics and competitor research behind those calls, across lending, wealth, broking, crypto and payments clients. Computer Science graduate with an IEEE publication.

Experience

HyperVerge, Bangalore
Key Account Manager, Mid-Market India Aug 2026 – Present
AI identity-verification / KYC SaaS; BFSI-heavy mid-market book (AE/AM + CSM)

- **Portfolio ownership:** took over a **34-account, ∼$22K MRR book in week one** and ran it at **∼112% GRR** (16 accounts at NRR $\geq$ 100%), spanning **digital & personal lending, MSME lending, gold loans, insurance premium financing, bond / fixed-income platforms, stockbroking & wealth, crypto exchanges, payments & cross-border, and insurance**.
- **Revenue growth: booked $8K in new MRR in the first 3 months — $5K already realised** — via new-logo closes, cross-sell and renegotiations.
- **Portfolio analytics:** built a portfolio model tracking account-level **GRR / NRR (TTM and YTD), NPS, DSO and receivables** and meeting cadence, with automatic risk flags — surfaced **17 of 34 accounts** needing action and set the order of QBRs and client visits.
- **Market & competitor research:** profiled **15+ key accounts** (funding, competitors, growth signals) and mapped each to a concrete opportunity — e.g. a client's new credit-card and housing-loan lines as new KYC journeys, and a client's acquisition as a route to a group-wide deal.
- **Pricing strategy:** traded a digital lender's discount ask for an **INR 4.5L committed monthly minimum**, securing a revenue floor and opening first-mover Video KYC and eSign deals.
- **Revenue leakage:** found modules billed with no signed agreement and a client running production on another NBFC's credentials; regularised both commercially and got the usage billed.
- **Positioning & go-to-market:** reframed pitches around each client's P&L and regulatory risk — compliance exposure for a bond platform, payout leakage and TDS for a loyalty business; sourced **4 new leads**, including a client referral.
- **Process design:** contributing to an internal framework that structures stakeholder coverage across the account-management team; ran a data-led QBR analysing **10+ onboarding funnels**.

HyperVerge, Bangalore
Integration Engineer, Solutions (Intern) Jan 2026 – Jun 2026

- Owned **6 enterprise fintech / banking accounts** from solution design to go-live; took **3 live at >95% verification conversion (∼10% lift)** by mapping client pain points to modules they hadn't scoped.
- Built **HV Deals Bot** (Python + Slack) to track deal stages team-wide and document the delivery process.

Selected Projects

CallSense — sales-call intelligence platform callsense-aaryan-s-maralihallis-projects.vercel.app

- AI scoring of recorded sales calls against a QA rubric, with compliance flags, manager dashboards and a feedback loop; live, full-stack.

Self-Supervised Cardiac Model (IEEE-published) github.com/Aaryansm11/ecg-ppg-arrhythmia-prediction

- Interpretable ML for stroke-risk prediction, benchmarked against the clinical standard (ROC-AUC 0.757).

Skills

- **Strategy & analysis:** portfolio & revenue analysis (MRR, GRR, NRR, DSO), market & competitor research, pricing & negotiation, business cases, stakeholder management
- **BFSI domain:** lending, wealth & broking, crypto, payments; KYC, Video KYC, CKYC, KYB, AML, RBI-regulated onboarding
- **Tools:** Excel / Google Sheets modelling, SQL, Python, Metabase, HubSpot, CPQ, Notion
- **Technical edge:** REST APIs & integrations, AI / LLM applications

Education

- **B.Tech, Computer Science** — PES University, Bangalore — 2022 – Jul 2026
- **IEEE ICASI 2026 (Kyoto), Oral Presentation** — interpretable ML for stroke prediction (ECG / PPG)
