Aaryan S. Maralihalli

Product-minded Engineer | Customer-facing & Data-driven

Bangalore, India · aaryanmaralihalli@gmail.com · +91-9019884683 · github.com/Aaryansm11 · linkedin.com/in/aaryan-maralihalli

Summary

Engineer who builds customer-centric products and obsesses over outcomes. On HyperVerge's Solutions team I owned the relationship for 6 enterprise clients, used conversion and drop-off data to lift verification conversion about 10% (to >95%), and partnered with Product and Engineering to ship the features that mattered. Strong technology grounding (I ship full products end to end), structured problem-solving, and clear communication across technical and business audiences. IEEE-published; CS graduate, 2026.

Experience

HyperVerge, Bangalore

Integration Engineer, Solutions Team (Intern) Jan 2026 – Jun 2026

AI identity-verification / KYC platform for enterprise banks & fintechs

- **Represented the customer:** ran discovery with 6 enterprise fintech clients to understand their goals and constraints, then translated pain points into the right product modules across 15+ workflows.
- **Drove outcomes with data:** monitored conversion and drop-off daily, isolated where users fell off, and lifted verification conversion to **>95% (about a 10% improvement)** over the prior onboarding flow.
- **Product thinking:** proactively identified unmet needs and added modules clients had not scoped, turning customer insight into product expansion and faster go-lives.
- **Cross-functional delivery:** worked with Engineering and Product through JIRA, wrote requirement docs (Solution Design Docs), prioritized feature gaps, and shipped fixes with minimal oversight.
- **Communication:** led client calls, integration walkthroughs, and go-live readiness for both technical and business stakeholders; built a Python + Slack bot to keep delivery on track.

Integrated Genetic Solutions (IGS), Bangalore

Project Intern, Medical AI & Web Dev Jun – Aug 2024

- Rebuilt a product dashboard from Bootstrap-JS to **React (MERN)** on a HIPAA-compliant medical product, improving processing of **5M+ records**; supported secure uploads and API telemetry.

Products I've built (0 → 1)

- **our-life-hq — 3D web app (shipped):** scoped, built, and shipped an interactive React Three Fiber app with Supabase auth and data on Cloudflare; owned the full build-to-ship loop for real users.
- **SDIS — secure document intelligence (RAG):** designed a privacy-first AI service (FastAPI, FAISS, PII redaction, RBAC, audit logging) and made the product/security tradeoffs (mask, hash, or remove modes); CI-tested.
- **LANGTRON — AI assistant:** defined the use case (fast, private technical recall), fine-tuned Mistral-7B (LoRA), and shipped FAISS retrieval that runs 100% local; **IEEE-published** on a separate ML research project.

Skills

- **Product:** customer discovery & empathy, product thinking, metrics definition & analysis, structured problem-solving, requirement specs (PRD-style docs)
- **Data:** SQL, funnel / conversion / drop-off analysis, BI dashboards (Metabase)
- **Technology grounding:** Python, REST APIs, full-stack (React), AI/LLM (RAG, LLM apps), Docker / AWS
- **Collaboration & communication:** cross-functional delivery (Engineering, Product, Design), JIRA, client presentations, written documentation

Education

- **B.Tech, Computer Science** — PES University, Bangalore — 2022 – Jul 2026
- **IEEE ICASI 2026 (Kyoto), Oral Presentation** — interpretable ML for stroke prediction & arrhythmia classification (ECG/PPG).
